SINATRA TEMPLATES

guided notes

INTRO TO SINATRA TEMPLATES

What is the name of the folder where you put your Sinatra templates?

Where do I put that folder?

Circle the correct name of my home template:

home.rb   home.erb

Circle the difference between these two template tags:

<% @my_greeting %>   <%= @my_greeting %>

Now, tell us: what is the functionality difference between those two tags?

What type of variable starts with an @ sign? Like @my_greeting?

What is special about that type of variable?

Why do all the variables in my template files have an @ before them?

What is the purpose of layout.erb?
